

# The Highgrove

The Highgrove is available with two roof pitch options, the lower being 27 degrees is, like the Kenchester garage, designed to be under 4m to the ridge and as such can often be built without planning permission (subject to a number location, we are happy to advise further). The roof at this pitch can accommodate slates or cedar shingles.

The second option is a 35 degree pitch which allows any roof material to be used and ensures the building blends in to its environment. Both buildings are the same footprint as the Kenchester garage but without the cat slide roof, provide a more useable building, especially for larger vehicles or when using the building as a workshop or home office.

## Full Assembly by our Expert Team

- Oak frame kit assembled by our friendly team
- Choice of roof tiles, guttering, felt and battens
